MINIMAT-T

The Depth Stop Driver for accurate depth assembly - independent from Torque

Beside a multitude of screw assemblies which require a defined torque or even angle, there are assemblies where the goal is not torque but rather depth, such as:

- Assemblies of wood to wood, or any other base
- Fastening of drywall to frame
- Assemblies of Plastic Window-Profiles with internal metal support

For such assemblies we offer the DEPRAG Depth-Stop Driver with an integrated and adjustable finder. This finder activates the depth shut-off clutch and allows an exact

and consistent screw depth. This model is available in straight- and pistolgrip design with maximum torque ranges of 5 - 12 Nm (44 - 106 in.lbs).

The straight screwdrivers allow the assembly of screws with right- and lefthand threads. Disassembly is possible only when sensing sleeve is taken off.

Pistol type screwdrivers allow the assembly and disassembly of screws with righthand thread. Assembly of screws with lefthand thread is not possible.
